SAMPLE DOCUMENT

Try to break my signature !

A tiny PDF signed with my own mini-CA, so you can test the verifier on eymeric.me/gpg without waiting for one of my quotes.

FOR	FROM	DATE
Anyone curious	Eymeric Chauchat	October 2026

01 How to test it

1. Drop this file on eymeric.me/gpg. Every check should be green.
2. Open it in any PDF editor, turn the ¥0 below into ¥1,000,000 and save.
3. Drop the edited file again: now it should say the file was modified.

02 A fake quote

DESCRIPTION	AMOUNT
Reading this sample	¥0
Dropping it on the verifier	¥0
Editing this total in a PDF editor	¥0

TOTAL ¥0

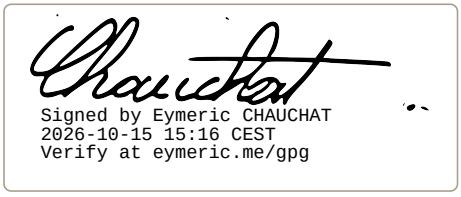

Not a real quote, nothing to pay ^^

03 Signature

The box on the right was an empty signature field until I signed it with `sign-pdf.sh`. The picture in it is only a picture, the proof is the signature over the whole file: it comes from me, and not a single byte changed since the timestamp.

Your PDF reader shows it too, with an “unknown” identity: my root certificate isn’t on Adobe’s list. That’s exactly what the verifier is for.
